CAREER OBJECTIVE

Fresh and motivated Full Stack Developer with a passion for innovation and problem solving. Skilled in building scalable front-end and back-end solutions with strong technical expertise. Seeking opportunities to deliver impactful, end-to-end applications in a forward-thinking organization.

EDUCATION

Rajalakshmi Institute of Technology Bachelor of Computer Science and Business System	2023-2027	85%
Shanthi Rani Matric Hr Sec School HSC	2022-2023	96%
Shanthi Rani Matric Hr Sec School SSLC	2020-2021	Pass

TECHNICAL SKILLS

Languages	- Java, Basic Python, C, SQL Basics
Web Development	- Advanced CSS, HTML, JavaScript
Tools	- MySQL, UI/UX design, Figma, Tableau, Excel, Flutter, PowerBI, Kotlin.
Frameworks	- ReactJS, NodeJS, Express JS, Django.

CERTIFICATIONS

SKILLNATION	- AI Dashboards using Microsoft Power BI
SOLO LEARN	- SQL Intermediate, Introduction to SQL
SCALER	- Unsupervised Machine Learning
MongoDB	- MongoDB Transactions

PROJECTS

Disaster Management:

Overview: DeDeveloped a scalable mobile application for real-time disaster response, featuring emergency alerts, SOS services, shelter location navigation, and donation support. The system achieved a fast 2.1-second SOS response time with 92.4% alert accuracy, ensuring reliable assistance during critical situations. It is designed to support over 10,000 users efficiently with a responsive and user-friendly interface. The platform enhances emergency coordination and resource accessibility for affected individuals. Future enhancements include offline functionality and integration with drone surveillance for improved disaster monitoring and response.

ECHOGUARD: ML-Based Early Warning System for Silent Software Project Failure:

Overview: ECHOGUARD is a web-based application designed to detect early signs of software project failure using Machine Learning. It integrates a modern frontend built with HTML, CSS, and JavaScript (or React), a Django backend, and a PostgreSQL database to provide real-time insights into project health. Users can securely register and log in using OTP-based authentication, upload project datasets, and receive a predictive risk score categorized as Low, Medium, or High. The system uses machine learning models like Random Forest and Logistic Regression (via Scikit-learn) to analyze key metrics such as commit frequency, issue trends, contributor activity, and code churn. It also features dashboards, alerts, and recommendation modules, with optional GitHub API integration and explainable AI to enhance transparency and help prevent silent project failures.

Social Media Automation Platform:

Overview: This project is a smart social media automation system that allows users to manage and publish content across multiple platforms including Instagram, YouTube, LinkedIn, and Facebook. It enables users to select and customize posts, automatically adjusting them into suitable grid formats for each platform. Users can choose specific platforms for posting, and the system will publish the content automatically. It also includes a scheduling feature that allows posts to be published at predefined times without manual intervention. Additionally, the platform provides an advanced auto-trigger feature where, when someone comments on a post, the system automatically sends a direct message (DM) response, enhancing engagement and saving time.

INTERNSHIPS

NSIC- Technical Services Centre	- Android App Developement
Codsoft	- UI/UXDesign
INTERNPE	- WebDevelopement
Edunet	- Foundation of AI
1m1b(Green Intern Powered By Salesforce	- AI & Data tools,Dashboard Creation,Reports
Hivericks Technology	- Full Stack

CODING EXPERIENCE

SkillRack HackerRank

INTEREST

- Web development
 - Competitive programming
 - Problem solving in hackathon
- User Interface designer
 - Creating a New App
